Search Notes

Dear Hwei-Siu,

Please find below an inventor search in the bibliographic and full-text foreign patent files, as well as keyword searches in the patent and non-patent literature files, both bibliographic and full text.

References of potential pertinence have been color-tabbed. Please review the whole packet, however.

You'll find that all of the relevant references are related in some way to the inventors in this case. An internet/Google search and STIC/NPL search did not prove fruitful with respect to the combination of any type of phase change material anywhere in the vicinity of a razor or razor head; there was much about razors and much about phase change material, but none in conjunction with one another for the purposes described. For that reason, I did not proceed with the secondary, elective aspects that we talked about going after in the event we found the main idea, like the lubricity of the head, the thermal conductive material, or the indicator embodiment. Should you desire us to tackle those beyond the PCM combination, please let us know.

Please contact me if I can refocus or expand any aspect of this case.

Sincerely,

Emory Damron
